## How it works and how it can help

The Health Check tool is based on the mnemonic PQRSTU assessment which offers a systematic approach to asking assessment questions without leaving out any details.

The tool can be used to assess many signs and symptoms related to our main health needs, and other signs and symptoms that are discussed during the complete subjective health assessment.

Keep in mind that the assessment is not a diagnosis. Its purpose is to help you think of the right questions and take note of relevant information to share with your doctor.
